- **Templates**

As a registered user you can create custom layout templates to standardize the way you and other users create documentation. For instance, you can create templates for:

1. Project status reports
2. New user instructions
3. Development specifications
4. Knowledge base resources
5. Social media newsrooms

[Register now](#) to start creating your own templates.

[register now](#)

- **Creating Pages**

Creating new content makes your documentation richer and more valuable. Use the New Page link to add a page or use the Edit Page link to make changes to an existing page.

### Moving Pages

Keeping your documentation in order has never been easier with MindTouch. Restructure your content hierarchy to achieve optimal organization.

1. Go to the page you wish to move
2. Click **Tools > Move Page**
3. Use the **Navigate** box to find a new location

- **My User Space**

As a MindTouch user you will be able to develop your own user space which can be public or private.

[register now](#)

### Privacy and Permissions

Need to keep something to yourself? Privacy with Mind Touch is easy and secure.

1. Go to the page you wish to protect
2. Click **Tools > Restrict Access**
3. Select the appropriate restriction level

## DekiScript

[DekiScript](#) is the safe lightweight scripting language used for rapid application development inside MindTouch. Try this in the editor to get started:

```
01.  {{
02.  if (!user.anonymous)
03.    {"Welcome " .. user.name;}
04.  }}
```

## Dynamic Templates

Get started now! Use these sample to start your first DekiScript app today.

1. [Hello World](#)
2. [Properties: User, Page and Site](#)
3. [Native Functions](#)

- **API**

The [MindTouch API](#) exposes all the functionality of MindTouch through a REST-based API. Here are some sample endpoints:

1. [This page's XML](#)
2. [Your user's XML](#)
3. [Popular Pages XML](#)

Learn more with our [API documentation](#).

## MindTouch Extensions

Here's a preview of the extensions on your MindTouch:

1. [Google](#)
2. [RSS Feeds](#)
3. [Flickr](#)

You can [write your own extensions](#) in any language, including PHP and C#.

- **Technical Documentation**

```
01.  <h1>Template:FrontTalk</h1>
02.  <div class="frontback">
03.    <div class="front">
04.      <a href="{{page.fronturi}}
05.    </div>
06.    <div class="back">
07.      <a href="{{page.talkuri}}>
```

Using MindTouch to power your developer community? MindTouch has a [solution for that](#).
