Achieve ROI in weeks and not months with the MindTouch Social Intranet.

MindTouch as an Intranet

MindTouch is often used to build powerful intranets by creating new applications and adding a social layer to existing systems and applications. With this platform you have the tools necessary to build your own intranet or you can contact us about prebuilt <u>Social Intranet Solution</u>, which includes capabilites not included in our downloads.

What makes a great intranet?

A great intranet is scalable, extensible, and easy to use. It connects projects, dashboards, content, and teams into a vibrant, real-time information fabric. Common tools found in intranets are project management tools, corporate initiatives management tools, and dashboarding capabilities to connect your data silos.

Executive Dashboards

MindTouch is ideal for creating mashups of information into dashboards. Built on top of <u>DReAM</u>, an open, technology-agnostic platform, you can integrate any system with MindTouch. This helps your team visualize and collaborate around data.

Once you have a data source, use <u>DekiScript</u> to retrieve and mashup that data. You can mashup a wide array of data sources like <u>bug reports</u>, <u>RSS feeds</u>, or even <u>image feeds</u>.

If you'd like something out of the box, MindTouch <u>offers a prepackaged solution</u> for executive dashboards of CRM data to create dynamic customer engagements.
